

1. synaptic vesicle localization
2. calcium ion-regulated exocytosis of neurotransmitter
3. detection of visible light
4. sensory perception of light stimulus
5. regulation of neurotransmitter secretion
6. cyclic-nucleotide-mediated signaling
7. cardiac conduction
8. amine transport
9. inner ear receptor cell development
10. regulation of membrane potential
11. neuromuscular synaptic transmission
12. vesicle fusion
13. inner ear receptor cell stereocilium organization
14. cGMP metabolic process
15. response to ammonium ion
16. potassium ion transport
17. peptidyl-threonine modification
18. cerebellar cortex formation
19. glucose homeostasis
20. phosphatidylinositol metabolic process
